

We are looking for an experienced

NPI Project Manager

Production sites setup & transfer

in order to contribute to the development of Fischer Connectors plants around the world.

Key responsibilities and activities

- Define and scope each new setup / transfer project with a clear identification of stakeholders and deliverables
- Lead a cross-functional team comprising manufacturing processes engineers, purchasing & sub-contractors, supply chain specialists and quality engineers
- Prepare plans and execute them in order to qualify new production sites
- Define and implement within the plants the necessary processes to guarantee the availability of components, resources, tools, equipment and the high-quality of the products delivered
- Drive troubleshooting and crisis situations to get the production back on track when needed
- Perform the risks analysis & reporting, define and follow mitigation actions
- Define and follow KPIs' for each production site

Hard skills

- A master's degree in engineering: microtechnology, mechanics or electronics
- More than 5 years of experience in project management, ideally in the creation and the industrialization of new products
- Experience with contract manufacturing is a real plus
- Able to work in French and English (C2 level required)

Soft skills

- Hands-on project manager who likes to get things done
- Communication skills
- Structured, rigorous and analytical approach
- Open to different cultures
- Ready to travel
